Using i5/OS Technology to Get More Availability for Less

5:00 pm Session Abstract

The world of High Availability is changing. As IBM provides new HA technology within i5/OS, a major problem is being able to understand and implement it. We will look at how the new and emerging technology made available in V5R3 and V5R4 can be used to help with your availability needs. We will think outside the box — looking not just at the technology but how to manipulate its capabilities to give you additional availability options. This session will cover the subjects of Remote Journaling, Virtual Tape, Optical Support, Cross Site Mirroring, and iASP. We will provide details of some of the technology we have reviewed and the results we received while doing tests.

Speaker: Chris Hird

is President and owner of Shield Advanced Solutions. He first worked with high availability at IBM Havant in the UK in 1989, and was responsible for the technical interface with the developers of HA products and for setting up a support structure in the UK to support IBM customers. Chris left IBM to set up Shield Software Services in 1993, which was an IBM business partner and a MiMiX reseller, and in 1997 he moved to Canada and launched Shield Advanced Solutions, which provides tools and utilities aimed mainly at supporting HA Environments. Chris is now working closely with Blair Technology Solutions Inc., helping provide customers with availability solutions. You can contact him via email at chird@blairtechnology.com.

DR & Security Confessions — The Movie [RATED: NC-17]

7:00 pm Session Abstract

Disaster Recovery and lack of Security can be a good or painful experience. The mistakes are common and plenty. Learn from someone who has seen the good, the obvious and the ugly within System i Security breaches, Backup, and Disaster Recovery. This session is a compilation of assumptions, technical gaps, blunders, oops, as well as good practices recommendations. Ensure that this movie does not portray your IT shop! (The names have been changed to protect the guilty.) We forgive all to those who confess and enjoy plenty of movie trivia.

Speaker: Richard Dolewski

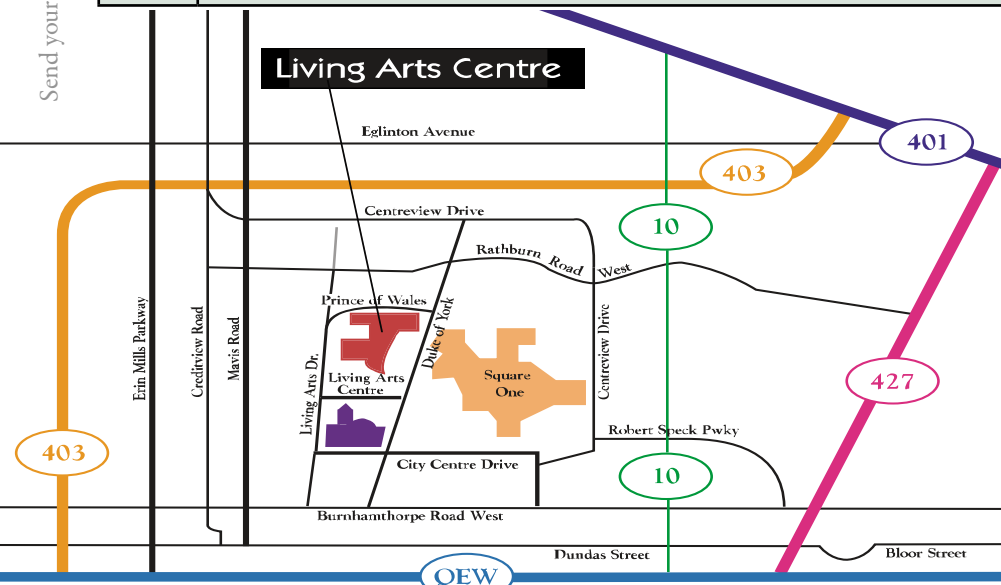

is a certified systems integration specialist and disaster recovery planner. As Vice President for Technical and Contingency Services provided by Mid-Range, he has extensive experience in Disaster Recovery Planning, BCP, Backup & Recovery program design, and Systems Availability. Richard has supported eighteen computer room disasters and conducted over two hundred disaster recovery tests. He is also an award winning speaker at various technical conferences, including IBM, COMMON, IBM Executive Events, and Local Users Groups.

AGENDA AT A GLANCE

Time	Topic
5:00	Using i5/OS Technology to Get More Availability for Less
6:00	Intermission / MoM & Networking (Complimentary Buffet)
7:00	DR & Security Confessions — The Movie

Send your suggestions for future topics to: leo@tug.ca

MoM Location

Living Arts Centre Mississauga (Staging Room)
 4141 Living Arts Drive,
 Mississauga ON L5B 4B8
 Hwy 403 & Hwy 10,
 West of Square One
 (Free underground parking)
