

Imagine If Your AS/400 and Your Printer

Communicated this Well...

IBM printers coordinate perfectly with your AS/400. So you won't get tripped up on critical printing task.

When printing reports, analyses, statements or other critical documents, you don't want font substitutions, misaligned columns, missing logos or critical information falling off the edge of the page. Errors like these can lead to delays or costly mistakes.

You want your printers output to match your input perfectly. Nothing more, nothing less. And when you connect an IBM workgroup printer to your AS/400, that's what you'll get. IBM Printers are designed to integrate seamlessly with the AS/400. They speak the same robust language - IPDS/AFP. So in a TCP/IP environment, you can get full functionality, full error recovery, full print fidelity.

Your people will thank you.

Nobody likes to grapple with temperamental printers. But when your AS/400 and IBM printers work together, printing tasks can go smoothly, which helps everyone work more productively. IBM printers can be configured and managed entirely over the Web. Users are notified about job status and completion, or if there's a problem that requires attention. And if a job is interrupted, the printer picks up where it left off. All automatically. There's less to manage, less to fix. So people have more time for their real work.

A solution for the long run.

If you upgrade your AS/400, your printers will perform just as well. Because every new AS/400 release is extensively pre tested on both new and older IBM printers. Likewise, every workgroup printer is individually tested as every previous AS/400 release level.

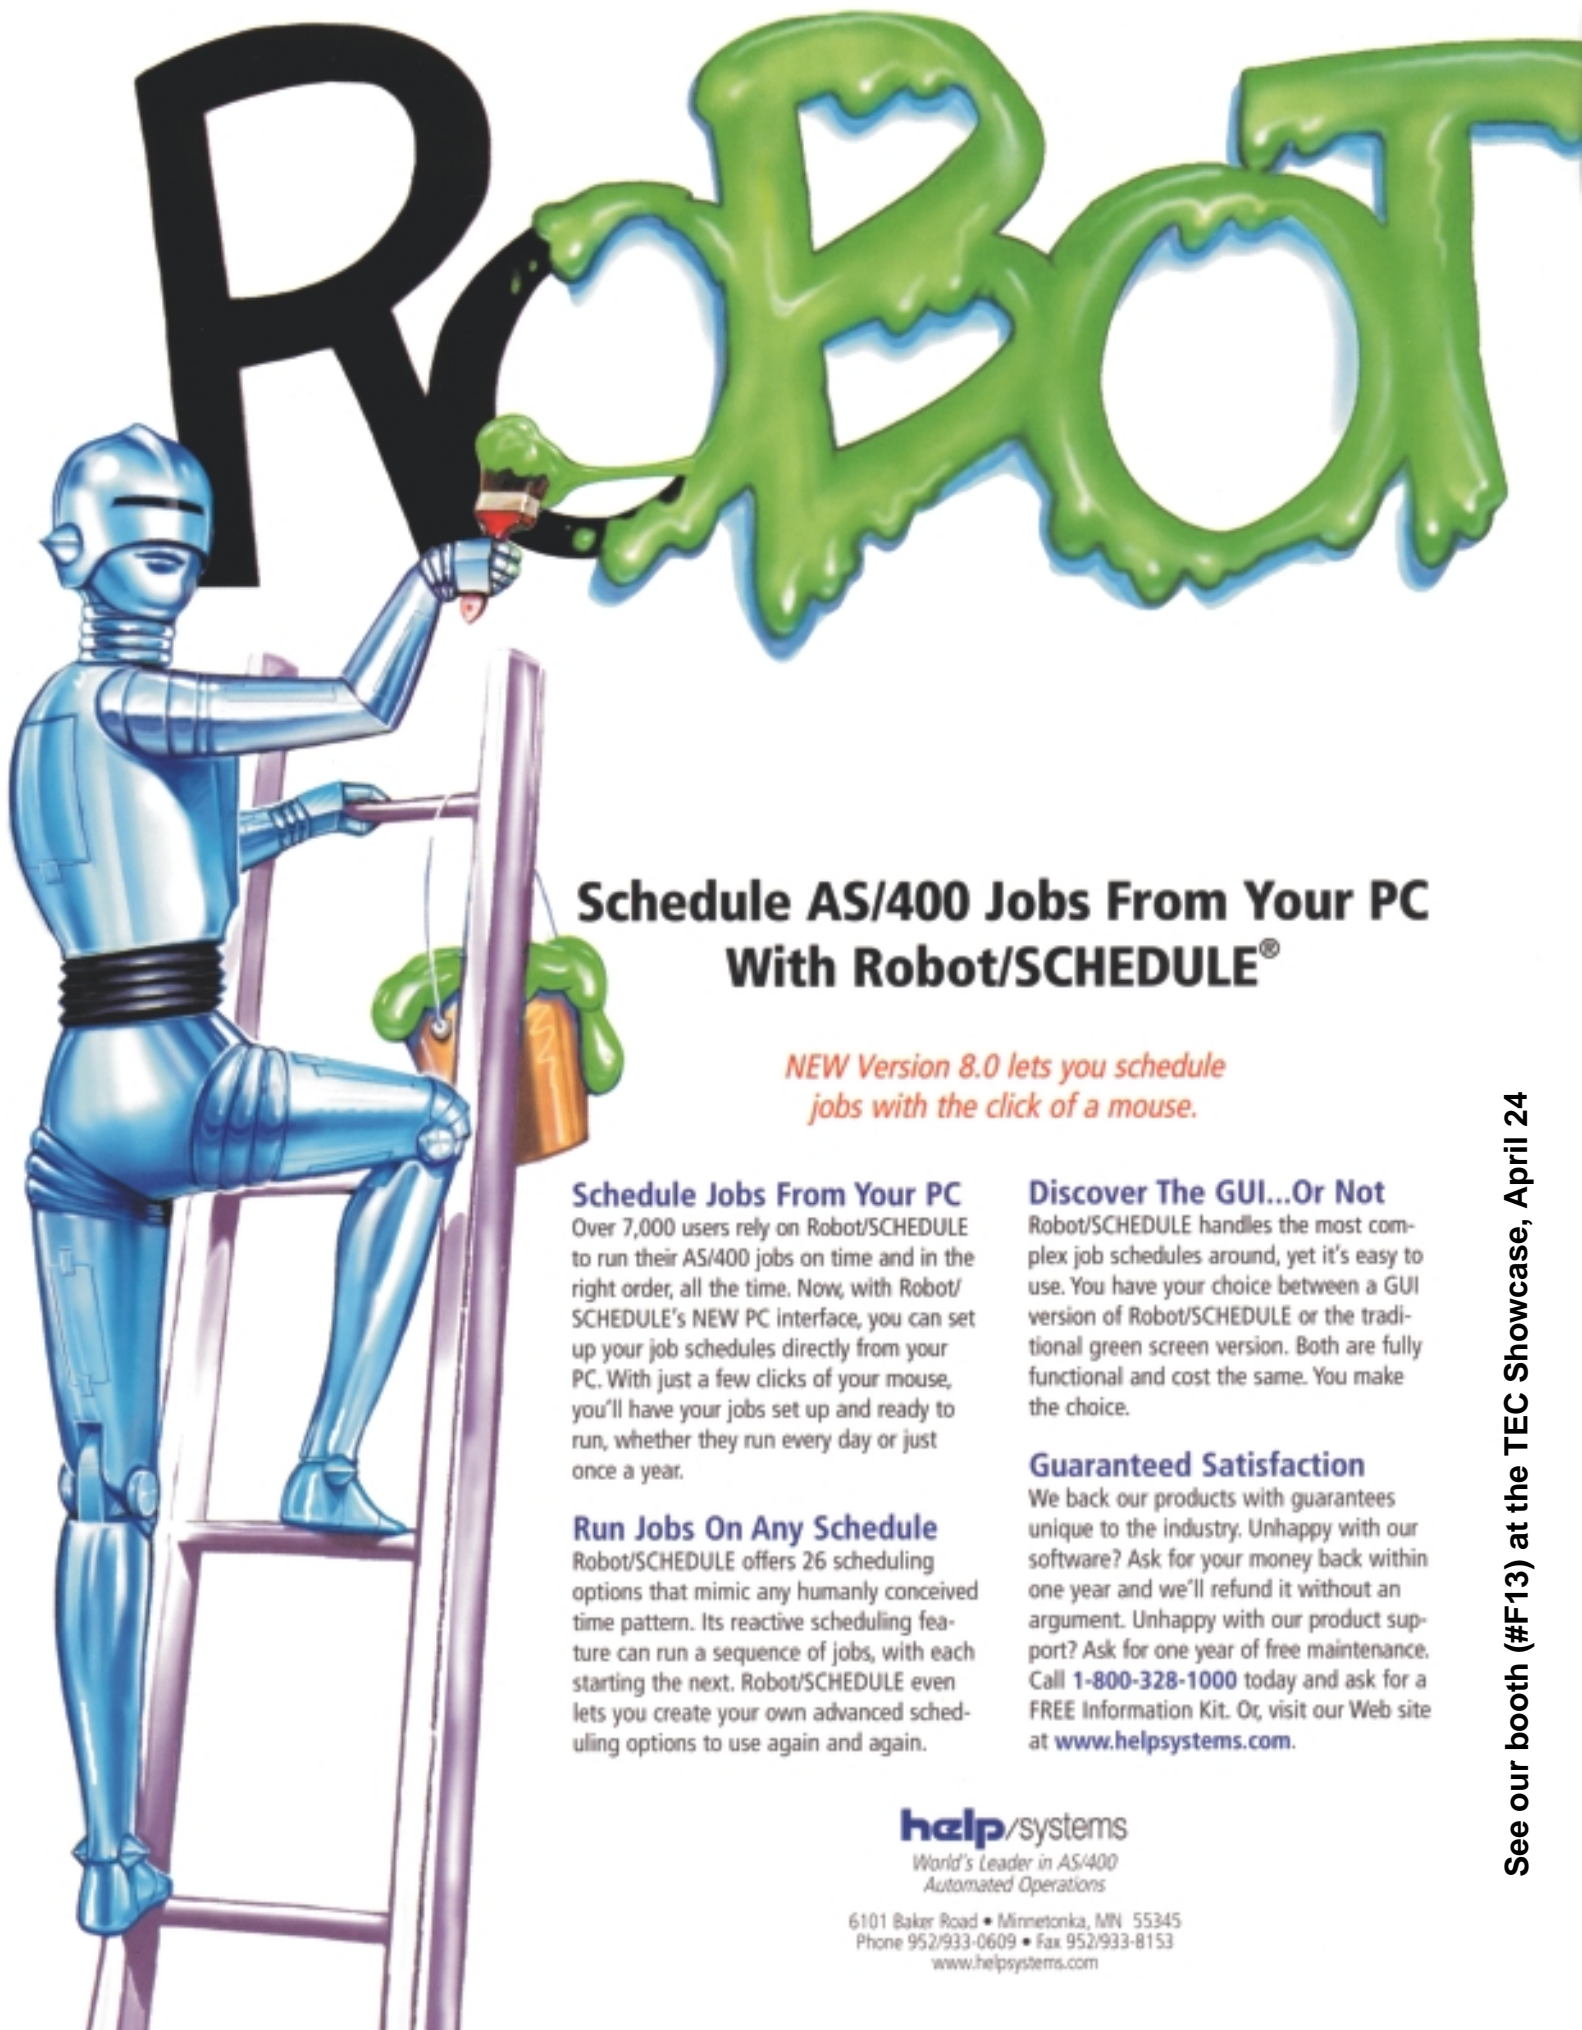

And unlike printing solutions that involve multiple suppliers, there should be no gaps with IBM service. We understand your server, your printers and everything in between. If you need support, we'll be there 24 x 7.

Let's start working together now.

To learn more about the benefits of choosing IBM printers for your AS/400 environment, contact your Authorized IBM AS/400 Solution Provider or call us for a referral at 1-800-358-6661, select your language option, and then select option 3. Or visit our web site at www.printers.ibm.com Because when it comes to critical printing needs, you want a seamless relationship between your server and your printer. And one sure way to get that is to choose IBM.

Schedule AS/400 Jobs From Your PC With Robot/SCHEDULE®

*NEW Version 8.0 lets you schedule
jobs with the click of a mouse.*

Schedule Jobs From Your PC

Over 7,000 users rely on Robot/SCHEDULE to run their AS/400 jobs on time and in the right order, all the time. Now, with Robot/SCHEDULE's NEW PC interface, you can set up your job schedules directly from your PC. With just a few clicks of your mouse, you'll have your jobs set up and ready to run, whether they run every day or just once a year.

Run Jobs On Any Schedule

Robot/SCHEDULE offers 26 scheduling options that mimic any humanly conceived time pattern. Its reactive scheduling feature can run a sequence of jobs, with each starting the next. Robot/SCHEDULE even lets you create your own advanced scheduling options to use again and again.

Discover The GUI...Or Not

Robot/SCHEDULE handles the most complex job schedules around, yet it's easy to use. You have your choice between a GUI version of Robot/SCHEDULE or the traditional green screen version. Both are fully functional and cost the same. You make the choice.

Guaranteed Satisfaction

We back our products with guarantees unique to the industry. Unhappy with our software? Ask for your money back within one year and we'll refund it without an argument. Unhappy with our product support? Ask for one year of free maintenance. Call 1-800-328-1000 today and ask for a FREE Information Kit. Or, visit our Web site at www.helpsystems.com.
